

Dear farmers,

Since the advent of chemical pesticides in the 19th century, we have embraced them as a treasure. However, unfortunately, lands have been increasingly eroded, water severely polluted, biodiversity destroyed and even worse, pest resistance has been steadily rising.

We are now trapped in a vicious cycle.

BUT, now there is a way to break this circle: ORGANIC FARMING.

According to our model, organic farming will perform well in pests control, crop health, plant reproduction, biodiversity, long-term sustainability. Furthermore, based on our multi-objective model, your profits are likely to increase.

WHAT is organic farming?

Organic farming is not merely about eliminating the use of chemicals, but rather about protecting crops from pests and weeds through appropriate human intervention while following natural principles.

We recommend you these measures:

- **Cultivate plants that are conductive to pests' natural enemies.** In the absence of pesticides, pests will increase in a short time, but with their enemies, they will decrease soon.
- **Change the types of crops to grow.** If you just grow a specific crop for a long time, weeds will become more and more stronger. Just turn to different kinds to guarantee your yields.
- **Promote soil health through organic fertilizers.** Nutrient-rich soil means healthier crops and organic fertilizers increase their nutritional value substantially.

AND, we've already taken profits into account. Currently, as more people pursue healthy food, the market of organic agricultural products is expanding. Furthermore, the yield of organic agriculture is no that lower than that of conventional agriculture, and you can save on labor costs. As a result, if you choose to engage in organic agriculture, **your income will gradually increase.**

BESIDES, the government will implement various actions to help you:

- **Offering financial incentives or subsidies**
- **Providing training for farmers to learn about organic farming methods**
- **Supporting the market of organic products**
