

Trends in Ecology & Evolution

October 2021, Volume 36, Number 10, pp. 875–956

Science & Society

- 875 **Poor groundwater governance threatens ancient subterranean fishes** *Rajeev Raghavan, Ralf Britz, and Neelesh Dahanukar*
- 879 **Biodiversity conservation cannot afford COVID-19 communication bungles** *Emily A. Gregg, Alexander M. Kusmanoff, Georgia E. Garrard, Lindall R. Kidd, and Sarah A. Bekessy*

Book Review

- 883 **How to obtain satisfying explanations of brain evolution** *Tom V. Smulders*

Forum

- 885 **Fisheries-induced changes of shoaling behaviour: mechanisms and potential consequences** *Valerio Sbragaglia, Jolle W. Jolles, Marta Coll, and Robert Arlinghaus*

Opinions

- 889 **Extended phenotypes: buffers or amplifiers of climate change?** *H. Arthur Woods, Sylvain Pincebourde, Michael E. Dillon, and John S. Terblanche*
- 899 **Plant phosphorus-acquisition and -use strategies affect soil carbon cycling** *Wenli Ding, Wen-Feng Cong, and Hans Lambers*
- 907 **Next-generation cophylogeny: unravelling eco-evolutionary processes** *Isabel Blasco-Costa, Alexander Hayward, Robert Poulin, and Juan A. Balbuena*
- 919 **Beyond organic farming – harnessing biodiversity-friendly landscapes** *Teja Tschamtké, Ingo Grass, Thomas C. Wanger, Catrin Westphal, and Péter Batáry*

(Contents continued)

Reviews

- 931 **Climate sensitivity across latitude: scaling physiology to communities** *Allison M. Louthan, Megan L. DeMarche, and Lauren G. Shoemaker*
- 943 **Archaeology and agriculture: plants, people, and past land-use** *Anne de Vareilles, Ruth Pelling, Jessie Woodbridge, and Ralph Fyfe*

Correction

- 955 **Information theory broadens the spectrum of molecular ecology and evolution** *W.B. Sherwin, A. Chao, L. Jost, and P.E. Smouse*

On the cover: The silk tents built by western tent caterpillars (*Malacosoma californicum*), shown here, alter the local temperatures experienced by caterpillars—providing warmth on cool, sunny days while raising the risk of overheating on hot days. Built structures such as these can be considered extended phenotypes. On pages 889–898, Art Woods and colleagues discuss how extended phenotypes influence how organisms will experience and respond to climate change. Photo: Art Woods
